GLASS TEMPLATE & DIGITIZING SERVICES

Have a unique shape, complex cutout, or custom glass project? *310* Tempering can turn your physical template into a precise digital drawing ready for production.

ACCURATE TEMPLATES EQUALS PRECISE RESULTS

A good template is the starting point for a great finished product. Templates should accurately represent the final size and shape of the glass and clearly identify important details such as:

- Overall dimensions and measurements
- Cutouts and notches
- Holes and hardware locations
- Angles, curves, and radiuses
- Glass thickness
- Finished edges
- Required tolerances
- Finished surface or orientation requirements

FROM PHYSICAL TEMPLATE TO DIGITAL FILE

For the best results, physical templates should be made from a durable material (preferably paper or cardboard) that maintains its shape during handling and transportation. You can schedule a template pickup with your next delivery or ship your template directly to one of our production facilities. Once received, *310* Tempering can convert the shape into a digital format ready for production.
