Shower Door & Enclosure Glass Care and Maintenance

With proper care and routine maintenance, your shower door and enclosure glass can remain beautiful for years to come. A few simple habits can help prevent water spots, mineral buildup, and damage to your glass and hardware.

Caring for Your Glass

- **Squeegee after every shower.** Remove water from the glass after each use to help prevent water spots and mineral deposits from forming.
- **Keep glass clean.** Regular cleaning helps prevent soap residue, water spots, and mineral buildup from accumulating over time.
- **Consider a glass surface protector.** A protective coating can help repel water and reduce buildup, but it does not eliminate the need for routine cleaning and squeegeeing.

Caring for Your Shower Hardware

- **Wipe hardware dry after every use.** Use a clean, soft, dry cloth or towel to remove water from hinges, handles, clips, and other metal components. This helps prevent mineral deposits and keeps finishes looking their best.
- **Clean regularly.** If you cannot dry the hardware after every shower, clean it weekly using a mild soap-and-warm-water solution and a soft, non-abrasive cloth.
- **Rinse and dry thoroughly.** After cleaning, rinse the hardware with clean, warm water and dry it with a soft cloth.
- **Protect the finish.** Avoid abrasive cleaners, harsh chemicals, and scrubbing tools that may scratch the surface or damage protective finishes.

General Cleaning Precautions

- Use soft, clean cloths, non-abrasive sponges, or soft-bristle brushes.
- Avoid steel wool, abrasive cleaning pads, and harsh abrasive cleansers.
- Do not use cleaning products containing bleach or chlorine on stainless steel components.
- Rinse cleaned surfaces thoroughly with clean, warm water and wipe them dry.
- Keep the shower properly ventilated to help release excess humidity, especially in steam shower enclosures.

A little routine care goes a long way. Squeegeeing the glass, drying the hardware, and using gentle cleaning methods can help preserve the appearance and longevity of your shower enclosure.

Always follow the care instructions provided for your specific glass, coating, and hardware finishes. If you have questions about your enclosure, contact your installer for guidance.

Recommendation: We offer ***310*** **MAX Clean & Restore**, a specially formulated solution that keeps glass looking like new while delivering a streak-free, polished finish - Learn More
